

Terraform

The screenshot shows the AWS IAM console interface. At the top, there's a navigation bar with the user's name 'NAVEEN KUMAR C' and account ID '4001-6034-6244'. The main content area is divided into two sections: 'Access keys (0)' and 'CloudFront key pairs (0)'. The 'Access keys' section includes a table with columns: Access key ID, Created on, Access key last used, Region last used, and Status. Below the table, it states 'No access keys' and provides a 'Create access key' button. The 'CloudFront key pairs' section includes a table with columns: Creation time, CloudFront key ID, and Status. Below the table, it states 'No access keys' and provides a 'Create CloudFront key pair' button. A sidebar on the right contains a menu with items: Account, Organization, Service Quotas, Billing and Cost Management, Security credentials (highlighted with a green box), and Sign out.

Access keys (0)

Use access keys to send programmatic calls to AWS from the AWS CLI, AWS Tools for PowerShell, AWS SDKs, or direct AWS API access keys (active or inactive) at a time. [Learn more](#)

Access key ID	Created on	Access key last used	Region last used	Status
No access keys				

As a best practice, avoid using long-term credentials like access keys. Instead, use tools which provide short term credentials.

Create access key

CloudFront key pairs (0)

Actions Upload Create CloudFront key pair

You use key pairs in Amazon CloudFront to create signed URLs. You can have a maximum of two CloudFront key pairs (active or inactive) at a time.

Creation time	CloudFront key ID	Status
No access keys
